ABSTRACT

The right to enjoy the benefits of scientific progress and its applications seeks to ensure equitable distribution of the knowledge and tools that impel social advancement. Reflecting on the condition of our Earth and the considerable environmental transformations impacting upon communities across the globe, the equitable distribution of the knowledge and tools to limit, redress, and prevent further damage is crucial. This work aims to illustrate how the right to scientific progress can assist in protecting human dignity in an environmentally sustainable world.
Thanks to:

Prof. William Schabas for his helpful supervision and critical analysis which kept me focused and driven.

The Lionel Murphy Foundation for its generosity and commitment to the advancement of human rights and social justice. The foundation’s continued financial assistance of Australians endeavouring to build a more equitable world enabled me to undertake the E.MA wholeheartedly.

My loving parents Triona and Fikry Bassiuoni for their unflattering support, honest opinions, encouraging words, faith in me and for loving me at my worst.

Mary Billing, Jenny Boylan, Simon Thornton, Michelle Worthington and Clare Preece for their suggestions, advice and time given to my rambling.

And lastly my housemates, Eoin Flood, Patricia McAfee and Joe Kerins for answering my questions, putting up with my stress and mess and being so good natured.
